
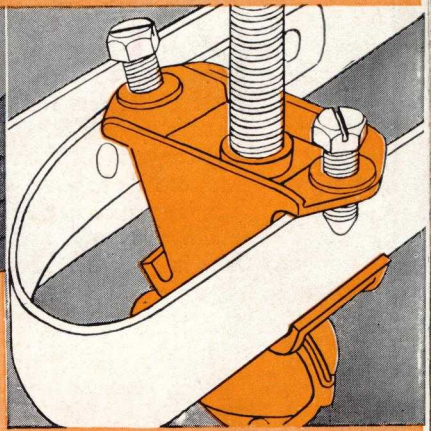
With handle and base detached and parts slipped into heavy canvas bag, the "Standup" stows away in any car.

Swivel base means secure footing on any surface, hard, soft, or on an angle.



"Standup" Jack clamps to any straight or slanting bumper back-bar. Note large set screw on clamp; side-sway cannot dislodge this jack. Bracket is safe, self-locking, at every height.

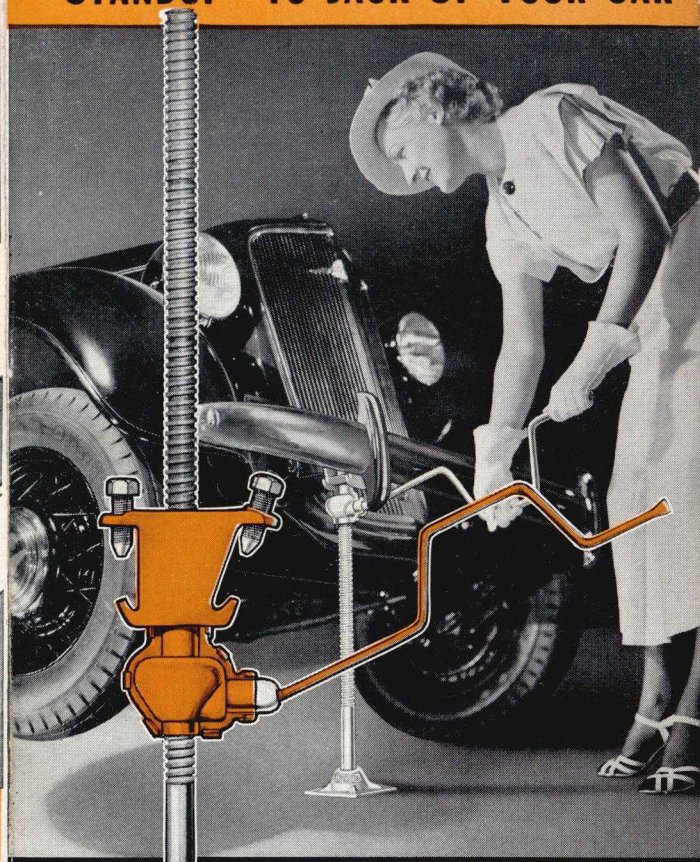
"STANDUP" TO JACK UP YOUR CAR



RYERSON-HAYNES

"STANDUP" JACK

NO MORE CRAWLING UNDER "STANDUP"

(Trade Mark) Pat. March 19, 1935—No. 1,994,984

LIFTS FROM OUTSIDE, NOT FROM BENEATH

This ends the awkward, dirty job of placing a jack under a car axle—a doubly disagreeable task on the newer cars with their overhanging streamlined bodies. Now the R & H "Standup" Jack picks up your car by the back bar of either the front or rear bumper—sparing your hands, your clothes, and your temper.

Wonderfully convenient! Several hundred thousand motorists are "Standup"-equipped, and the "Standup" Jack is standard on one of America's most popular streamlined cars. You'll be glad to have a "Standup" Jack in your car. See it at your Service Station, Garage or Accessory Dealer's.

The sturdy Ryerson-Haynes "Standup" Jack has a detachable base and handle. Packed in its stout canvas bag it may be carried in any car on the road today. . . . Built of heavy stampings, malleable castings and rustless cadmium-plated steel, with machine-cut gearing. . . . Is suitable for any car, old or new, up to 3500 lbs. weight—this includes all but the heaviest of cars.

$3.50 $3.85 in Denver and West
